

Ningbo Municipal Solid Waste Minimization and Recycling Project

Description

Purpose: To increase the volume and proportion of municipal solid waste recycled with processes for waste separation at source and recycling.

Expected Results (include): Strengthen waste management in 6 urban districts, kitchen waste treatment, project implementation, and capacity building and project management support.

IBRD Financing: \$80 million

Development Challenge

The project aims to assist selected districts in Ningbo Municipality to increase the volume and proportion of municipal solid waste recycled with processes for waste separation at source and recycling.

Project Description

The project supports development of capacity for system management and outreach activities, such as community mobilization, education, awareness-raising to encourage waste separation, programs for restaurants to install and operate oil-water separators; and regulations for solid waste separation and pricing.
