Country Challenge
Yining is the capital of a region in western China (2010 population of 270,000) with low economic development compared to eastern China. As a gateway to Central Asia and Europe, its population is expected to grow to 900,000 and see high transportation demand. Yining’s existing public bus transportation system is in a very poor condition, causes accidents, congestion, and is insufficient for the existing population.

Project Goals
The project improves the transport mobility in the central area of Yining City and provides transport accessibility in the selected new areas of the city, all in a safe, clean and efficient manner.

Expected Results include:
- Reduced peak-hour travel times in two integrated corridors.
- Increased ridership and access in selected new development areas.
- Reduced fatalities from traffic accidents.

IBRD Loan Amount:
US$100 million
