

## Green Bond Criteria: Adaptation

Improve the livelihoods of small-scale farmers and fisher folk by increasing their productivity and access to markets while strengthening the conservation of coastal and marine resources.

## Expected Results include:

- Increase incomes of about 1.9 million farmers and fisher folk and the value of their products

## IBRD Loan Amount:

US\$501.25 million

## Country Challenge

Despite growing urbanization, rural Philippines (51% of the population) faces poverty, lack of food security, and environmental degradation.

Destructive weather and the Philippines's known vulnerability to climate change call for action to increase the resilience of the rural population.

## Project Goals

The project supports rural infrastructure (farm-to-market roads, bridges, potable water systems, fish landings, storage facilities) and enterprise development investments to help farmers and fisher folk recover and increase income-generating activities. The project targets poor, small, and unorganized producers, paying special attention to women and to areas affected by Typhoon Yolanda (Haiyan) and the Bohol earthquake.
