Risk financing is an important element of the strategic framework for disaster risk management advocated by the World Bank Group.

A comprehensive disaster risk management strategy, involving risk assessment, institutional capacity building, investments in risk mitigation, emergency preparedness, and risk financing, can be very effective in mitigating the impacts of natural disasters.

The World Bank Group has two complementary disaster risk financing product lines:

**Sovereign risk financing for direct budget support**
- **Contingent Financing.** Development Policy Loan (DPL) with Catastrophe Deferred Drawdown Option (Cat DDO) to provide immediate liquidity up to USD500 million or 0.25% of GDP (whichever is less) to IBRD-member countries in the event of a natural disaster.

**Sovereign Catastrophe Insurance Pools.** Advisory services to help countries establish national catastrophe insurance pools such as the Turkish Catastrophe Insurance Pool, which offers efficiently priced earthquake insurance to more than 2.5 million homeowners. The World Bank Group is also supporting the creation of a regional catastrophe reinsurance pool for South-East European countries.

**Catastrophe Bonds.** Cat bonds to transfer risk to investors by allowing the issuer to not repay the bond principal if a major natural disaster occurs. The World Bank Group has developed a platform for a multi-country, multi-peril cat bond that transfers diversified risk to private investors.

**Derivatives for Natural Disaster Risk Management.** Intermediation services to help protect countries against the risk of adverse weather, geological, and meteorological events. When intermediating on behalf of clients, the Bank stands between the client and the private sector, engaging in back-to-back transactions with both parties to pass on the terms of the risk protection from the market counterparty to the client, while providing protection to the client against the credit risk of the private sector counterparty.

**Advisory services to strengthen domestic property catastrophe insurance markets**
- **Catastrophe Insurance Pools.** Advisory services to help countries establish national catastrophe insurance pools such as the Caribbean Catastrophe Risk Insurance Facility (CCRIF), for example, offers parametric insurance against major hurricanes and earthquakes in 16 Caribbean countries. The World Bank can also help sovereigns access risk capital from international markets in the absence of an insurance vehicle such as the Pacific Catastrophe Risk Insurance Pool.

**Index-Based Agricultural Insurance.** Index-based insurance programs to protect private sector participants such as farmers and rural financial institutions against extreme weather. The National Agricultural Insurance Scheme (covering more than 20 million farmers) and the Weather-Based Crop Insurance Scheme (covering more than 600,000 farmers) in India protect against poor harvests caused by drought or frost. Similar initiatives are ongoing in Malawi, Thailand, and Central America.

**Agricultural Insurance Pool.** Advisory services to help countries establish agricultural insurance pools such as the index-based livestock insurance program in Mongolia (covering more than 600,000 animals and involving four private insurance companies).

**Specialized Index-Based Insurance Facility.** Advisory services supported the creation of the Global Index Insurance Facility, a multi-donor trust fund that promotes index-based insurance in developing countries.

**Added Value to Clients**
- **Expertise in disaster risk management**
  Extensive experience in partnering with countries to establish efficient and innovative solutions both at macro (country) and micro (household, farmer) levels

- **Customized financial solutions**
  Customized transactions catering to each country’s specific needs, type of hazard, macroeconomic environment, and desired level of risk protection

- **Access to financial markets**
  Access to international reinsurance and capital markets and capacity building for future transactions between the country and the financial markets

- **Extensive country knowledge and convening power**
  Global reach and country knowledge to identify opportunities for countries to pool risks together
